

COVID-19 and Information Standards

Bi-weekly SNAP update

Purpose of this update:

This update is to provide a current summary of activity relating to COVID-19 in relation to products and services under the remit of the Terminology and Classifications Service within NHS Digital.

An update will normally be provided every alternate Friday during the COVID-19 pandemic.

Error in previous SNAP update in relation to indeterminate RNA code:

The previous SNAP update provided details of a new concept for an **indeterminate RNA detection result**. The SNOMED CT Concept ID and Preferred Term were typed incorrectly in the (6th November 2020) SNAP update. Correct details have been updated below.

As this code is not in use, and the 11th November 2020 SNOMED CT Release file was not affected with the error, please be assured there is no chance a result was incorrectly recorded. As specified in the last SNAP update, this code is for information purposes only and may be inactivated in a future update.

Standardised description	SNOMED CT Concept ID	SNOMED CT Preferred Term
SARS-CoV-2-ORGQ	1324871000000102	SARS-CoV-2 (severe acute respiratory syndrome coronavirus 2) RNA (ribonucleic acid) detection result indeterminate

Previous Snap Updates

SNAP updates, including previous issues, are also available on the [COVID-19 Information standards](#) Delen sharing platform.
